PROFESSIONAL SUMMARY

DevOps and Cloud Engineer with 2 years in IT, working across cloud infrastructure, CI/CD automation, containerization, and Linux systems administration. Currently manages cloud and infrastructure operations at Debug Tech, automating deployment and system workflows and running containerized services with monitoring built in. Came up through enterprise infrastructure support at Wipro, so troubleshooting, incident handling, and operational discipline are part of the work rather than bolted on. Also ships production software end to end — two AI desktop products, Slacker AI and Aurora, built on Electron and Node services with multi-platform release pipelines and Docker-based deployment.

TECHNICAL SKILLS

Cloud Platforms: AWS (EC2, EKS, S3, RDS, IAM, CloudWatch, ECR), Microsoft Azure

Containerization & Orchestration: Docker, Kubernetes, Docker Compose, Helm, Container Registry

Infrastructure as Code: Terraform, Ansible, AWS CloudFormation

CI/CD & GitOps: Jenkins, GitHub Actions, GitLab CI, ArgoCD

Monitoring & Observability: Prometheus, Grafana, ELK Stack (Elasticsearch, Logstash, Kibana), Datadog

Scripting & Programming: Python, Bash/Shell, TypeScript, Node.js

Version Control: Git, GitHub, GitLab, Bitbucket

Databases & Storage: PostgreSQL, MySQL, Redis, Prisma, AWS S3

Operating Systems: Linux (RHEL, Ubuntu, CentOS), Windows Server

Networking & Web Servers: DNS, TCP/IP, VPN, NGINX, load balancing, WebSockets

Release Engineering: Electron packaging with electron-builder, multi-platform installer matrices, SHA256 release verification, Docker-based deploys on Railway

AI-Assisted Engineering: OpenAI and Deepgram APIs applied to production features — live transcription, retrieval, and assistant workflows

PROFESSIONAL EXPERIENCE

DevOps Engineer | Debug Tech

May 2026 – Present | Hyderabad, India

Stack: AWS · Docker · Kubernetes · Jenkins · GitHub Actions · Terraform · Ansible · Linux · Prometheus · Grafana · Git

- Manage cloud and infrastructure operations, keeping business-critical services available, performant, and secure.
- Automate deployment and system workflows, cutting manual release effort and configuration drift.
- Build and operate containerized services with Docker, applying repeatable, version-controlled delivery practices.
- Provision and configure infrastructure through Terraform and Ansible so environments rebuild from code instead of console changes.
- Design and maintain CI/CD pipelines covering build, test, and deployment across environments.
- Monitor system health and application performance with Prometheus and Grafana, and act on alerting to keep environments reliable.
- Work with development teams to strengthen DevOps practice, workflow automation, and cloud-native delivery.

Associate System Engineer | Wipro

September 2024 – May 2026 | Hyderabad, India

Stack: Linux · Windows Server · Networking · Cloud · System Monitoring · Incident Management · Shell

- Supported enterprise IT infrastructure and operations across Linux, networking, and cloud technologies.

- Maintained Linux-based systems and enterprise applications to keep business operations running without interruption.
- Monitored system performance, troubleshoot issues, and applied corrective fixes across cloud and infrastructure environments.
- Assisted with application deployments, system validation, and service availability across production environments.
- Automated routine operational tasks with shell scripting, taking manual steps out of the support path.
- Took part in incident management, root cause analysis, and operational documentation for reliable, secure IT operations.

PROJECTS

Slacker AI — Real-Time AI Meeting & Interview Copilot

Stack: Electron · React · TypeScript · Tailwind · Zustand · Express · OpenAI · Deepgram · PostgreSQL · WebSockets · Railway

- Desktop copilot that transcribes each speaker live and composes answers mid-conversation, with a separate always-on-top overlay window that stays out of screen shares.
- Built the Electron desktop app, the hardened Express API (helmet, rate limiting, zod validation) on PostgreSQL, and the release pipeline.
- Ships macOS and Windows installers through electron-builder, with documented install paths for unsigned Gatekeeper and SmartScreen warnings.

Aurora — Real-Time AI Meeting Companion

Stack: Electron · React · Express · Prisma · PostgreSQL · Redis · AWS S3 · Deepgram · OpenAI · Docker · Railway

- Desktop and web product that transcribes as people speak, answers privately mid-call, and returns clean notes afterwards.
- pnpm monorepo deployed to Railway from a Dockerfile, with Prisma migrations as a pre-deploy step, a health check endpoint, and an on-failure restart policy.
- Five-target installer matrix — macOS arm64 and x64, Windows x64, Linux AppImage and .deb — published with SHA256 checksums and electron-updater.

Client & Company Websites — JSAM Collections, The Career Insights, Debug Tech Studio

Stack: Nuxt · Vue · WebGL · Sanity CMS · HTML · CSS · JavaScript · Vercel

- Built and shipped a multi-page modest-fashion storefront with WhatsApp ordering, a talent-solutions marketing site, and the Debug Tech Studio company site.
- Handled responsive layout, performance, and static deployment across all three.

CERTIFICATIONS

- AWS Certified Cloud Practitioner (CLF-C02)
- Linux Administration Certification

EDUCATION

Bachelor of Technology (Information Technology) — Shadan College of Engineering & Technology

Hyderabad, India | 2021 – 2024 | CGPA: 6.43/10
